

DRT Policy regarding Environment, Health and Safety and Responsible Care®

Care for the Environment, Health and Safety is our Company's number 1 priority.

Our core business is focused on the development, manufacturing and transport of biosourced chemicals. The nature of our business means we must all act responsibly.

In this framework, DRT joined the Responsible Care® initiative and its objectives aiming to continuously improve our EHS performance.

The role of the Senior Management Team is to define and communicate a Responsible Care® Policy according to the Values and Strategy of DRT Group.

Thus, our Policy must specify that all operations, products, services and development projects will be carried out using the highest quality level of safety, environmental, and health protection.

Our success is based on the commitment of all those acting on behalf of DRT (Management, employees and contractors of DRT) to comply with regulatory and procedural requirements applicable to all our activities worldwide.

Therefore, we are committed to providing all our colleagues and contractors with the relevant human, organizational and technical resources needed to efficiently meet our company's obligation to minimize risk and prevent major accidents.

DRT is committed to Responsible Care®. Each of you must be committed as well.
